

Blood Utilization Management

Pinpoint where unnecessary transfusions are negatively impacting your bottom line.

Health systems can end up literally bleeding money because of blood product waste and transfusion errors. Increase cost savings – and your patient’s care experience – with real-time data and insight into how blood products are managed and utilized across your organization.

With Blood Utilization Management from hc1, your team can now:

- Monitor blood unit use in real-time by overall inventory, by specialty, and even by specific location.
- Gain insight into financial spend based on product type, physician orders, and overall usage rates, and share this potential cost savings with executives and stakeholders.
- Automatically monitor critical metrics such as crossmatched-to-transfusion ratios.

- Identify offending physicians or drops in benchmark adherence and work to drive immediate change.
- Develop organization-wide rules around internal handling errors, expiration date processes, and more to initiate awareness.
- Leverage new data to educate providers on the correlation between transfusion data and corresponding test results.
- Increase patient sentiment and satisfaction by decreasing repetitive draws.
